Investment Highlights

- **Corporate Strategy:** *“Disciplined light oil growth developing high rate of return assets to generate strong free adjusted funds flow with conservative leverage ratios while maximizing returns to shareholders”*
- **Technically focused team with 8 year track record of shareholder returns through multiple cycles**
 - Consistently delivered production and cash flow per share growth while reducing debt
 - Sustainable business model through various commodity price cycles
 - High rate of return assets and clean balance sheet with excess liquidity → positioned to be opportunistic
 - Operational & technical expertise and quality assets drive top quartile reserve adds and capital efficiencies
- **2024 Guidance (@ US \$75.00 WTI):**
 - \$64 – \$67 million capital program providing smart growth with a payout ratio⁽¹⁾ of approximately 87%
 - 20% – 25% less capital spending compared to 2023 will drive strong capital efficiencies
 - 9,000 – 9,500 boe/d⁽²⁾ (59% – 61% liquids)
 - Light oil growth of 7% over 2023, maximizing AFF from drilling high netback light oil wells
 - AFF of \$89 – \$96 million
 - FAFF of \$22 – \$32 million
 - 0.4x – 0.5x net debt / EBITDA⁽³⁾, one of the lowest leverage ratios amongst our peers
 - Flexible second half 2024 capital program
- **Sustainable dividend and return of capital program in place**
 - Base monthly dividend of \$0.015/share (\$0.18 per year), \$23mm paid out in last 17 months
 - 7.7% dividend yield rewards investors patiently awaiting improved valuation multiples (currently near all time lows)

(2) See “Production Breakdown by Product Type” in the Reader Advisories

(3) Non-GAAP measure or ratio. See “Non-GAAP and Other Financial Measures” in Reader Advisories

OPERATING SUMMARY

2024 Average Production (light oil & liquids %)	9,000 – 9,500 boe/d (59% – 61%) ⁽¹⁾
2024 Hz Drilling Plans	14.0 – 15.0 net

2023 Reserves

Proved Developed Producing	17.3 Mmboe
Total Proved Reserves	45.9 Mmboe
Total Proved and Probable Reserves	61.6 Mmboe
Total Proved and Probable NPV BT10% (mm)	\$824

63% oil & NGL
in TPP reserve booking

MARKET SUMMARY

Basic Shares Outstanding (basic / FD) (mm)	90.2 / 92.8
Market Capitalization (@ \$2.35 per share) (mm)	\$212
Enterprise Value (@ \$2.35 per share) (mm)	\$258
Monthly Dividend (\$ per share / Annualized Yield @ \$2.35)	\$0.015 / 7.7%
Liquidity (shares/day average over last 6 months / 1 month)	~ 343,000 / 251,000
Employee & Director Ownership (diluted)	5.9%
Large Insider Shareholders (diluted)	22.6%

DEBT SUMMARY (\$mm)

Net Debt ⁽²⁾ (@ December 31, 2023)	\$46
Credit Facilities	\$110

(1) See "Production Breakdown by Product Type" in the Reader Advisories

(2) Capital management measure. See "Non-GAAP and Other Financial Measures" in Reader Advisories

- Returned \$16.5 million (7.8% yield) to shareholders through dividends and NCIB
- Generated \$91.8 million (\$1.03 per basic share⁽¹⁾) of AFF⁽²⁾, our second highest ever, despite WTI and AECO prices decreasing 18% and 50% respectively compared to 2022
- Strong operating income profit margins of 58%
- Record light oil production of 4,142 bbl/d in Q4 2023
- Exited 2023 at 0.5x net debt to EBITDA⁽³⁾; one of the lower leverage ratios amongst peers
- Realized net income of \$32.7 million (\$0.37 per basic share; \$0.36 per diluted share)
- Long reserve life index highlights a sizable drilling inventory
 - PDP: 5.2 years
 - TP: 13.9 years
 - TPP: 18.7 years

TP NAV/share of \$6.07; a 158% premium to current share price

8 Year Track Record

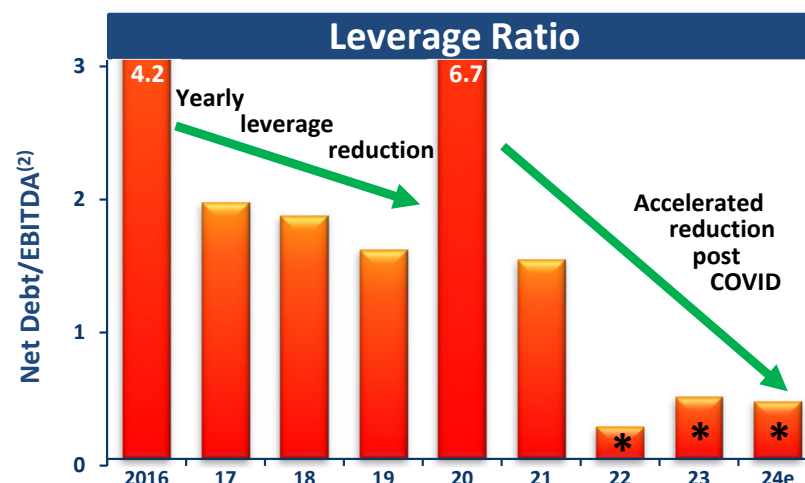

Historical track record of Per Share Growth, Free Cash Flow and Debt Reduction

- 2024 forecast oil growth of 7% over 2023

- 2024 forecast to remain consistent with 2023 after considering decreases to WTI and natural gas pricing

- Accelerated leverage reduction post-COVID
- 2023 net debt/EBITDA of 0.5x
- 2024 forecast net debt/EBITDA of 0.4x – 0.5x
- * Includes the impact of cash dividend beginning November 2022

(1) See "Production Breakdown by Product Type" in the Reader Advisories

(2) Capital management measure. See "Non-GAAP and Other Financial Measures" in Reader Advisories

2016 includes only 7 weeks as a new public company

(4) These amounts do not include potential future purchases through the Company's NCIB.

Focused Asset Base

Drilling industry pacesetter horizontal wells and exceeding forecasted volumes

85% Cardium
production

PEMBINA

Production⁽¹⁾:

- Cardium ~3,450 boe/d (52% oil & NGL)
- Belly River ~700 boe/d (91% oil & NGL)

Upside: 147 net Hz drilling locations

Land: 48,480 (38,350 net) acres

2024 Hz drilling plans: 8.0 - 10.0 net

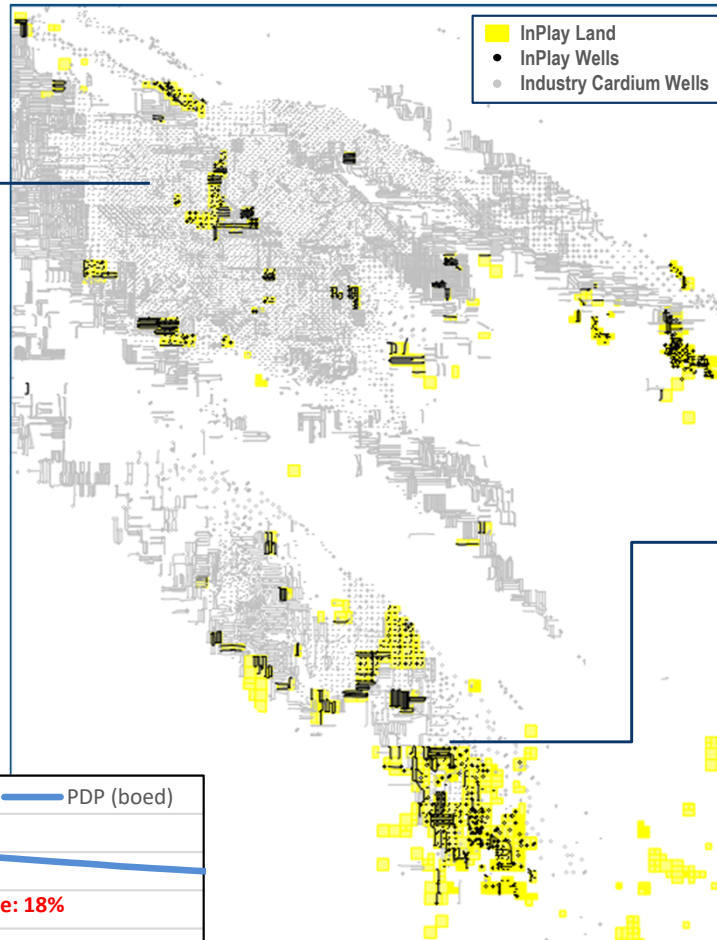

Top Quartile

declines in oil weighted growth universe

**Low decline production + high netback light oil
+ quick payout inventory**

= PER SHARE OIL GROWTH + FREE CASH FLOW

WILLESDEN GREEN

Production⁽¹⁾: ~4,800 boe/d (58% oil & NGL)

Upside: 176 net Hz drilling locations

Land: 104,431 (69,148 net) acres Cardium

2024 Hz drilling plans: 5.0 – 6.0 net

OTHER

Production⁽¹⁾: ~300 boe/d (50% oil & NGL)

Upside: 135 net Hz drilling locations

(Mannville, Nisku, Duvernay)

(1) Approximate production by area, see "Production Breakdown by Product Type" in the Reader Advisories

Dominant land position in the Willesden Green Cardium trend

Low risk horizontal infill drilling in well established field with large oil in place and low recovery factors

Quick payout drilling inventory

176 net drilling locations

Two required facility upgrades in 2023 increased natural gas processing and takeaway capacity from 8,400 mcf/d to 17,300 mcf/d

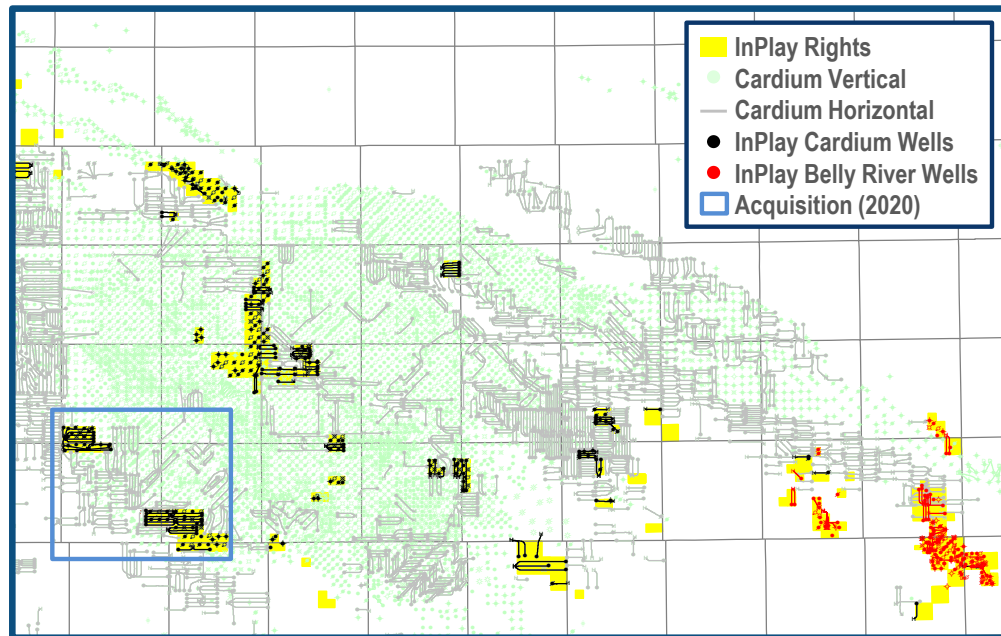

Track record executing of smart acquisitions - PSEC (closed Nov 30, 2021)

- Doubled Company's land holdings
- Location inventory increased by 90%
- Contiguous lands allow for extended reach horizontal drilling
- Low decline base production (~10%) requires minimal capital to keep flat
- Highly accretive acquisition metrics (estimated at time of transaction)
 - 15% on 2022e production / share
 - 12% on 2022e AFF / share
 - 17% on 2022e FAFF / share
 - 2022e Reserves / share: 21% PDP / 60% TP / 46% TPP

(1) See "Production Breakdown by Product Type" in the Reader Advisories
 (2) Based on field estimates

Low risk drilling with quick payouts; well established field with large oil in place and low recovery factors

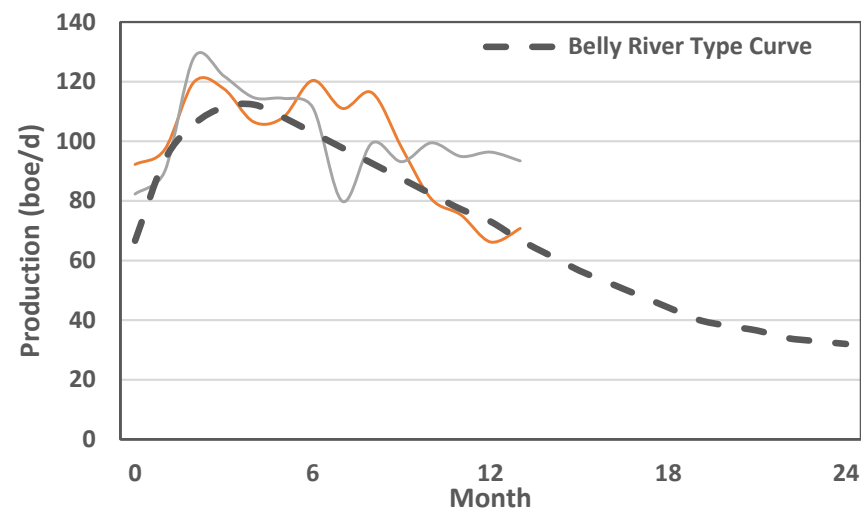

Cardium: 89 net drilling locations

- Secured long-term access to gas processing capacity allowing InPlay to recommence drilling high IRR inventory where we have been curtailed and unable to drill since Q2-22
- Track record of executing smart acquisitions with 2020 strategic Cardium asset acquisition
 - Cost of acquisition, first six wells and multi-well battery to handle full field development paid out in ~9 months
 - 100% WI allows development at a pace within our control

Belly River: 58 net drilling locations

- Characterized by high oil weighting (~90%), low decline and premium price to MSW
- Two wells drilled in Nov 2022 paid out in <1 year
- Drilled first multilateral well with encouraging results

The Cardium and Belly River are well established plays providing some of the best low risk returns in the Western Canada Sedimentary Basin

Pembina Cardium

Willesden Green Cardium

Belly River

- **2022 Sustainability report available on website**
- **Continuous reduction in emissions intensity**
 - Emissions intensity improvements since 2017 have resulted in a reduction of 25,000 tonnes of CO₂e (equivalent to removing 5,400 cars from the road for one year⁽¹⁾)
 - Added 2 VRU's in 2022 to further reduce emissions
 - Increasing gas conservation through operations including the 100% utilization of pneumatic controls at field sites
- **Rigorous pipeline integrity program to mitigate risk of environmental impact, with regular visual inspections**
- **Participating in the AER's Licensee Life-Cycle Management Program. (previously the Area Based Closure ("ABC") program)**
 - Industry has seen decommissioning costs reduced up to 40% as a result of efficiencies
 - 29 gross wells abandoned in 2023
 - 114 gross pipeline abandonments in 2023
 - 120 active reclamations ongoing in 2023

(1) The average North American car emits 4.6 tonnes of CO₂ per year (Source: EPA / Natural Resources Canada)

(2) The peers above are defined as light oil weighted small to large cap exploration and development companies having greater than 60% oil and liquids weighting (BNE, CJ, GXE, SGY, TVE, WCP)

- **Executing Our Strategy of Managing a Highly Sustainable Company**
 - Smart, sustainable light oil production growth
 - Maximize FAFF ensuring sustainable return of capital to shareholders
 - Maintain clean balance sheet with low leverage ratios
 - Position company to be opportunistic
- **2024 forecast :**
 - AFF⁽¹⁾ of \$89 – \$96 million
 - FAFF⁽²⁾ of \$22 – \$32 million
 - Net debt/EBITDA⁽²⁾ of 0.4x – 0.5x, one of the lowest levered amongst our peers
- **8 year track record of shareholder returns through various commodity price cycles**
- **High rate of return assets and clean balance sheet with excess liquidity; positioned to be opportunistic**
- **Focused on providing a sustainable return of capital to shareholders**
 - Continued monthly dividend of \$0.015 per share (\$0.18 per year); 7.7% dividend yield
 - Returned \$23 million of capital to shareholders through dividends over the last 17 months
 - Renewed normal course issuer bid on November 14, 2023

(2) Non-GAAP measure or ratio. See "Non-GAAP and Other Financial Measures" in Reader Advisories

Appendix

Doug Bartole, President and CEO and Director, P. Eng., ICD.D (over 29 years)

- Founder of InPlay; Founder, President and CEO of Vero Energy; VP Operations of True Energy; Management and Engineering roles at Husky Energy, Renaissance Energy and PanCanadian Petroleum
- Director of Invicta Energy (founder of Royal Acquisition Corp. which was the public RTO vehicle for Invicta)
- Member of APEGA, Institute of Corporate Directors, and a Governor of CAPP (Canadian Association of Petroleum Producers)

Kevin Yakiwchuk, Vice President Exploration, MSc, P. Geol. (over 28 years)

- Founder of InPlay; Founder and VP Exploration of Vero Energy; VP Exploration at True Energy; Geologist at Crestar Energy, Renaissance Energy and Shell Canada

Darren Dittmer, CFO, CPA, CMA (over 27 years)

- CFO of Barrick Energy Inc. from September 2008 until sale of all assets in July 2013
- Controller and CFO of Cadence Energy and prior Controller of Kereco Energy, Ketch Resources and Upton Resources

Brent Howard, Vice President Operations, P. Eng. (over 20 years)

- Manager of Operations at Prairie Storm Energy and subsequently at InPlay after acquisition
- Previously VP Production at Coral Hill Energy Ltd. Prior Engineering roles at Bellamont Exploration Ltd., Wave Energy Ltd., and Penn West Energy Trust

Kevin Leonard, BComm, Vice President Business & Corporate Development (over 18 years)

- Founder, Managing Director Investment Banking Eight Capital; Managing Director Energy Investment Banking Dundee Capital Markets, Vice President Energy Investment Banking Canaccord Genuity

East Basin Duvernay Shale

Emerging Light Oil Play

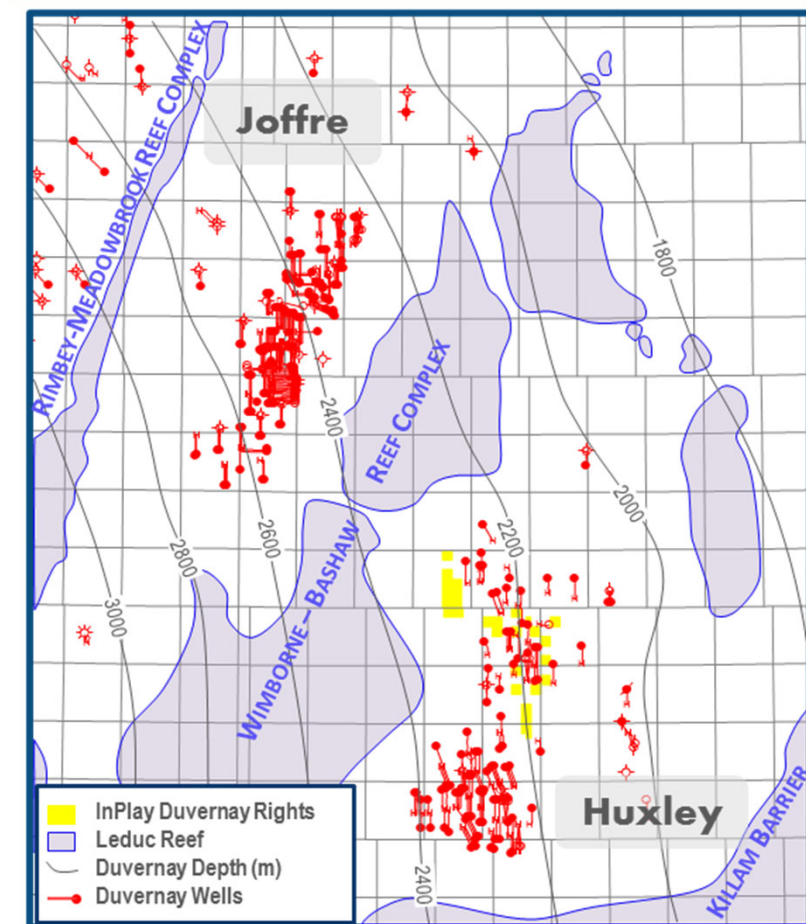

21 Predominantly Crown Sections in the Huxley Area (13,485 net acres)

- Extensive activity directly offsetting InPlay's land
 - Long land tenure allows InPlay a measured pace of development as others prove up the play around us

Significant Light Oil Resource (high quality oil - premium price to Edmonton Light)

Upside Potential

- Potential recovery of 250 mbbl to >500 mbbl per well
- 125 net drilling locations (at 6 wells/section) targeting Upper Duvernay
 - Hz wells been drilled into Lower Duvernay show similar production results as Upper Duvernay
- Well costs reflect pad development scenario; single delineation wells currently estimated to cost 30%-40% more

* Production restrictions due to low commodity pricing

US\$60 WTI Oil Price (NPV 10% / IRR)			
EUR vs. CAPEX	\$4.5mm (1 mile)	\$5.5mm (1.5 mile)	\$6.5mm (2 mile)
250 mbbl	\$4.1mm / 51%	\$3.2mm / 32%	\$2.2mm / 22%
315 mbbl	\$5.9mm / 86%	\$5.3mm / 54%	\$4.4mm / 37%
400 mbbl	\$8.5mm / 173%	\$8.0mm / 101%	\$7.3mm / 67%
500 mbbl	\$11.6mm / 396%	\$11.1mm / 205%	\$10.6mm / 127%
US\$70 WTI Oil Price (NPV 10% / IRR)			
250 mbbl	\$4.9mm / 64%	\$4.1mm / 40%	\$3.1mm / 27%
315 mbbl	\$6.8mm / 110%	\$6.3mm / 68%	\$5.5mm / 46%
400 mbbl	\$9.6mm / 232%	\$9.1mm / 131%	\$8.6mm / 85%
500 mbbl	\$12.9mm / 576%	\$12.5mm / 280%	\$12.1mm / 167%

* Longer length Hz likely trends to higher recovery

Hedges (Commodity derivative contracts)

	Q1/24	Q2/24	Q3/24	Q4/24	Q1/25
Natural Gas AECO Swap (mcf/d) ⁽¹⁾	-	1,900	1,900	640	-
Hedged price (\$AECO/mcf)	-	\$2.00	\$2.00	\$2.00	-
Natural Gas AECO Costless Collar (mcf/d) ⁽²⁾	4,870	3,790	3,790	5,050	3,790
Hedged price (\$AECO/mcf)	\$2.48 - \$3.82	\$2.08 - \$2.77	\$2.08 - \$2.77	\$2.27 - \$3.04	\$2.48 - \$3.46
Crude Oil Costless Collar (bbl/d) ⁽²⁾	-	1,000	-	-	-
Hedged price (\$USD WTI/bbl)	-	\$72.00 - \$80.25	-	-	-
Crude Oil Costless Collar (bbl/d) ⁽²⁾	330	-	-	-	-
Hedged price (\$CAD WTI/bbl)	\$95.00 - \$110.00	-	-	-	-
Crude Oil WTI Three-way Collar (bbl/d) ⁽³⁾	-	-	1,000	1,000	-
Low sold put price (\$USD WTI/bbl)	-	-	\$64.00	\$64.00	-
Mid bought put price (\$USD WTI/bbl)	-	-	\$74.00	\$74.00	-
High sold call price (\$USD WTI/bbl)	-	-	\$82.48	\$82.48	-

(1) Fixed price swaps provide InPlay with a guaranteed price in lieu of realization of floating index prices.

(2) Costless collars indicate InPlay concurrently bought put and sold call options at strike prices such that the costs and premiums received offset each other, thereby completing the derivative contracts on a costless basis.

(3) The WTI three-way collars are a combination high priced sold call, low priced sold put and a mid-priced bought put. The high sold call price is the maximum price the Company will receive for the contract volumes. The mid bought put price is the minimum price InPlay will receive, unless the market price falls below the low sold put strike price, in which case InPlay receives market price plus the difference between the mid bought put price minus the low sold put price.

Slide 2

1. 2024 production, adjusted funds flow, free adjusted funds flow, net debt/EBITDA and relevant growth rates are based on forecasted assumptions outlined in the “Forward Looking Information and Statements” in the Reader Advisories.

Slide 3

1. 2024 production rates and drilling plans are based on forecasted assumptions as outlined in the “Forward Looking Information and Statements” section in the Reader Advisories.
2. Reserves and NPV are derived from InPlay’s independent reserve evaluation effective December 31, 2023. See “Reserves” and “Net Present Value Estimates” within “Oil and Gas Advisories” in the Reader Advisories.
3. Shares (basic and fully dilutive) outstanding at the date of this presentation.
4. Shares outstanding include shares held in trust to settle the future vesting of Restricted Awards and Performance Awards.
5. Market capitalization and Enterprise value based on current share price. Net debt as of December 31, 2023.
6. Enterprise value is calculated by the Company as the Company’s market capitalization plus net debt. Refer below for calculation of Enterprise Value.

Basic Shares Outstanding	90.2
Market Capitalization (@ assumed \$2.35 per share) (mm)	\$212
Net debt (mm)	\$46
Enterprise Value (@ assumed \$2.35 per share) (mm)	\$258

Slide 4

1. Refer to notes in InPlay’s press release dated March 15, 2024 for details of 2023 Reserve Life Index calculations.

Slide 6

1. 2024 forecasted annual average production, production/share, AFF, AFF/share, Net debt / EBITDA and growth rates are based on forecasted assumptions as outlined in the “Forward Looking Information and Statements” section in the Reader Advisories.
2. Reserves are derived from InPlay’s independent reserve evaluation effective December 31, 2023. See “Reserves” and “Net Present Value Estimates” within “Oil and Gas Advisories” in the Reader Advisories.

Slide 7

1. Reserves and associated reserve values are derived from InPlay’s independent reserve evaluation effective December 31, 2023.
2. See “Reserves” and “Net Present Value Estimates” under “Oil and Gas Advisories”.
3. Duvernay land holdings attributed a value of \$10.0 million (\$700/acre) for 14,271 net acres based on internal valuations. The remaining undeveloped acreage is based on an internal valuation of \$12.7 million (\$261/acre) for 48,834 net acres. These internal valuations are based on land sales in the area.
4. Net debt and basic shares outstanding as at December 31, 2023.

Slide 8

1. Refer to notes in InPlay’s press release dated March 13, 2024 for details of 2023 Capital efficiencies, FD&A and Recycle ratio calculations.
2. Peers are defined as light oil weighted small to large cap exploration and development companies having greater than 60% oil and liquids weighting (BNE, CJ, GXE, OBE, SGY, TVE, WCP).

Slide 9

1. Refer to the “Forward Looking Information” section in the “Readers Advisories” for the assumptions used in the calculation of forecasted 2024 “Adjusted funds flow”, “Free adjusted funds flow”, “Net Debt” and “Net Debt/EBITDA”
2. A US\$55 WTI scenario assumes a 10% deflation in CAPEX due to reduced industry activity at lower commodity prices; no change to OPEX

Slide 10

1. See “Drilling Locations” within “Oil and Gas Advisories” in the Reader Advisories.
2. See “Type Curves and Potential Recovery Estimates” under “Oil and Gas Advisories” in the Reader Advisories.
3. 2024 drilling plans are based on forecasted assumptions as outlined in the “Forward Looking Information and Statements” section in the Reader Advisories.

Slide 11

1. The aggregate consideration ascribed to the Acquisition at the time the Acquisition Agreement was entered into is \$50 million, comprised of \$40 million of cash consideration and the issuance of 8,333,333 Common Shares at a deemed issuance price of \$1.20 per Common Share. For accounting and financial statement purposes under IFRS, the value of the share consideration payable under the Acquisition will be based upon the market price of the Common Shares immediately prior to the Acquisition Closing Date. Had the Acquisition Closing Date occurred on October 1, 2021, the value ascribed to the share consideration, based on an October 1, 2021 closing price of \$1.66 per Common Share, would have been approximately \$13.8 million. The Adjusted Working Capital of Prairie Storm being assumed by InPlay upon closing of the Acquisition is estimated to be \$9.5 million, after payment of Prairie Storm’s estimated transaction costs resulting in net consideration ascribed to the Acquisition of \$40.5 million. All figures are based upon the assumed exercise of all outstanding Prairie Storm Options effective immediately prior to completion of the Acquisition. See “Non-GAAP Measures and Ratios” for additional details.

Slide 11 (cont'd)

2. The estimated Adjusted Funds Flow and Free Adjusted Funds Flow for the Prairie Storm Assets in 2022 is based on strip pricing as of September 27, 2021. The key underlying assumptions used in the development of these estimates are as follows: US \$69.75/bbl WTI; \$3.70/GJ AECO; \$33.40/boe NGL realized price; FX rate CA\$/US\$ 0.79; MSW Differential US \$5.60/bbl; royalties - \$4.25 - \$4.75/boe; operating expenses – \$8.25 - \$10.25/boe; interest – \$0.65 - \$1.15/boe; capital expenditures - \$10 - \$12 million. Operating costs per boe for the Prairie Storm Assets in 2022 are forecasted to decrease from Prairie Storm's historical actual results achieved as a result of fixed operating costs being allocated to the growing production base expected to result from InPlay's planned drilling program on the Prairie Storm Assets subsequent to closing of the Acquisition. See "Non-GAAP Measures and Ratios" and "Forward Looking Information and Statements" section in the Reader Advisories.
3. Proved developed producing reserves of 4.9 MMboe at December 31, 2020 consisting of 1.5 MMbbl of light and medium crude oil (31%), 1.2 MMbbl of NGLs (24%) and 13.3 MMcf of natural gas (45%). Total proved reserves of 21.3 MMboe at December 31, 2020 consisting of 8.3 MMbbl of light and medium crude oil (39%), 4.0 MMbbl of NGLs (19%) and 54.2 MMcf of natural gas (42%). Total proved plus probable reserves of 26.8 MMboe at December 31, 2020 consisting of 10.6 MMbbl of light and medium crude oil (39%), 5.0 MMbbl of NGLs (19%) and 67.7 MMcf of natural gas (42%). See "Reserves" within "Oil and Gas Advisories" in the Reader Advisories
4. The acquisition accretion metrics are based on total net consideration estimate of \$40.5 million as outlined in Note 1
5. Accretion metrics and acquisition accretion is based on an estimated 2022 annual average production of 2,755 boe/d, operating netback of \$31.75/boe, adjusted funds flow of \$29.5 - \$31.5 million, capital expenditures of \$10.0 - \$12.0 million and free adjusted funds flow of \$16.5 - \$18.5 million relating to the Prairie Storm assets.
6. The 2022E capital expenditures do not reflect Prairie Storm's 2022 capital expenditures or future development costs as listed in the Prairie Storm Reserves Report, but instead reflect an expected InPlay capital program following completion of the Acquisition and, subsequently, InPlay's development plans for the Prairie Storm Assets

Slide 13

1. See "Type Curves and Potential Recovery Estimates" under "Oil and Gas Advisories" in the Reader Advisories.
2. See "Drilling Locations" within "Oil and Gas Advisories" in the Reader Advisories.
3. Economics are based on: WTI/Edmonton Par light oil differential of negative \$2.50 / \$3.00 / \$3.50 respectively over indicated WTI pricing range, AECO \$3.50/GJ. CAD/USD FX rates of 0.72, 0.74 and 0.76 respectively over indicated WTI pricing range.

Slide 15

1. Adjusted funds flow, free adjusted funds flow, Net Debt/EBITDA and production per debt adjusted share are based on forecasted assumptions outlined in the "Forward Looking Information and Statements" in the Reader Advisories.

Slide 18

1. See "Drilling Locations" within "Oil and Gas Advisories" in the Reader Advisories.
2. Potential recovery estimates for the area are internal estimates made by comparing industry historical well results surrounding InPlay's land base in the area to the type curve library noted in the "Type Curves and Potential Recovery Estimates" section in "Oil and Gas Advisories" to identify the most applicable type curve and associated recovery. The referenced estimates are meant to closely approximate Proved Plus Probable Undeveloped reserves as defined by COGE. Given the process described above however, these estimates are considered internally generated recovery estimates prepared by InPlay's technical team and are not reserve of resource estimates prepared in accordance with the requirements of COGE.
3. Economics are based on: WTI/Edmonton Par light oil differential of negative \$3.50 / \$4.00 / \$4.50 respectively over indicated WTI pricing range, AECO \$4.00/GJ
4. Economics assume Crown land for royalties payable on produced volumes (InPlay's Duvernay lands are 100% Crown)
5. See "Estimated Ultimate Recovery" within "Oil and Gas Advisories" in the Reader Advisories.

All amounts in this presentation are stated in Canadian dollars unless otherwise specified. Throughout this presentation, the terms Boe (barrels of oil equivalent) and Mmboe (millions of barrels of oil equivalent) are used. Such terms when used in isolation, may be misleading. In accordance with Canadian practice, production volumes and revenues are reported on a company gross basis, before deduction of Crown and other royalties and without including any royalty interest, unless otherwise stated. Unless otherwise specified, all reserves volumes in this presentation (and all information derived therefrom) are based on "company gross reserves" using forecast prices and costs. Complete disclosure of our oil and gas reserves and other oil and gas information in accordance with NI 51-101 is available on our SEDAR profile at www.sedar.com. The recovery and reserve estimates contained herein are estimates only and there is no guarantee that the estimated reserves will be recovered. In relation to the disclosure of estimates for individual properties, such estimates may not reflect the same confidence level as estimates of reserves and future net revenue for all properties, due to the effects of aggregation. The Company's belief that it will establish additional reserves over time with conversion of probable undeveloped reserves into proved reserves is a forward-looking statement and is based on certain assumptions and is subject to certain risks, as discussed previously under the heading "Forward-Looking Information and Statements".

The information contained in this corporate presentation does not purport to be all-inclusive or to contain all information that a prospective investor may require. Prospective investors are encouraged to conduct their own analysis and reviews of InPlay and of the information contained in this corporate presentation. Without limitation, prospective investors should consider the advice of their financial, legal, accounting, tax and other advisors and such other factors they consider appropriate in investigating and analyzing InPlay.

Oil and Gas Advisories

The recovery and reserve estimates of InPlay's reserves provided herein are estimates only and there is no guarantee that the estimated reserves will be recovered. Throughout this presentation various references are made to "potential" and "targeted" resource and recoveries which have been prepared by management of InPlay and are not estimates of reserves or resources. Accordingly, undue reliance should not be placed on same. Such information has been prepared by management for the purposes of making capital investment decisions and for internal budget preparation only. In addition, forward-looking statements or information are based on a number of material factors, expectations or assumptions of InPlay which have been used to develop such statements and information but which may prove to be incorrect. Although InPlay believes that the expectations reflected in such forward-looking statements or information are reasonable, undue reliance should not be placed on forward-looking statements because InPlay can give no assurance that such expectations will prove to be correct. In addition to other factors and assumptions which may be identified herein, assumptions have been made regarding, among other things: the impact of increasing competition; the general stability of the economic and political environment in which InPlay operates; the timely receipt of any required regulatory approvals; the ability of InPlay to obtain qualified staff, equipment and services in a timely and cost efficient manner; the ability of InPlay to add production and reserves through acquisition, development and exploration activities; drilling results; the ability of the operator of the projects in which InPlay has an interest in to operate the field in a safe, efficient and effective manner; field production rates and decline rates; the ability to replace and expand oil and natural gas reserves through acquisition, development and exploration; risks associated with the degree of certainty in resource assessments; the timing and cost of pipeline, storage and facility construction and expansion and the ability of InPlay to secure adequate product transportation; future commodity prices; currency, exchange and interest rates; regulatory framework regarding royalties, taxes and environmental matters in the jurisdictions in which InPlay operates; and the ability of InPlay to successfully market its oil and natural gas products.

Certain information in this document may constitute "analogous information" as defined in National Instrument 51-101 – Standards of Disclosure for Oil and Gas Activities ("NI-51-101"), including but not limited to, information relating to the areas in geographical proximity to lands that are or may be held by InPlay. Such information has been obtained from government sources, regulatory agencies or other industry participants. InPlay believes the information is relevant as it helps to define the reservoir characteristics in which InPlay may hold an interest. InPlay is unable to confirm that the analogous information was prepared by a qualified reserves evaluator or auditor. Such information is not an estimate of the reserves or resources attributable to lands held or potentially to be held by InPlay and there is no certainty that the reservoir data and economics information for the lands held or potentially to be held by InPlay will be similar to the information presented herein. The reader is cautioned that the data relied upon by InPlay may be in error and/or may not be analogous to such lands to be held by InPlay.

Any references in this presentation to initial, early and/or test or production/performance rates are useful in confirming the presence of hydrocarbons, however, such rates are not determinative of the rates at which such wells will produce or continue production and to decline thereafter. Additionally, such rates may also include recovered "load oil" fluid used in well completion stimulation. Readers are cautioned not to place reliance on such rates in calculating the aggregate production for InPlay. The initial production rate may be estimated based on other third-party estimates or limited data available at this time. In all cases in this presentation, initial production or tests are not necessarily indicative of long-term performance of the relevant well or fields or of ultimate recovery of hydrocarbons. References to light oil, NGLs or natural gas production in this document refer to the light and medium crude oil, natural gas liquids and conventional natural gas product types, respectively, as defined in NI-51-101.

Reserves – All reserves disclosed in this presentation are derived from InPlay's independent reserve evaluation effective December 31, 2023, complete details of which can be found within our Annual Information form filed on SEDAR. Reserves are estimated remaining quantities of oil and natural gas and related substances anticipated to be recoverable from known accumulations, as of a given date, based on the analysis of drilling, geological, geophysical and engineering data; the use of established technology; and specified economic conditions, which are generally accepted as being reasonable. Reserves are classified according to the degree of certainty associated with the estimates as follows:

Proved Reserves are those reserves that can be estimated with a high degree of certainty to be recoverable. It is likely that the actual remaining quantities recovered will exceed the estimated proved reserves.

Proved Developed Producing Reserves are those proved reserves that are expected to be recovered from completion intervals open at the time of the estimate. These reserves may be currently producing or, if shut in, they must have previously been on production, and the date of resumption of production must be known with reasonable certainty.

Proved Developed Non Producing Reserves are those proved reserves that either have not been on production, or have previously been on production but are shut in and the date of resumption of production is unknown.

Probable Reserves are those additional reserves that are less certain to be recovered than proved reserves. It is equally likely that the actual remaining quantities recovered will be greater or less than the sum of the estimated proved plus probable reserves.

Test Results and Initial Production Rates – A pressure transient analysis or well-test interpretation has not been carried out and thus certain of the test results provided herein should be considered to be preliminary until such analysis or interpretation has been completed. Test results and initial production rates disclosed herein may not necessarily be indicative of long term performance or of ultimate recovery. Initial Production ("IP") rates indicate the average daily production over the indicated daily period.

BOE equivalent – Barrel of oil equivalents or BOEs may be misleading, particularly if used in isolation. A BOE conversion ratio of 6 mcf: 1 bbl is based on an energy equivalency conversion method primarily applicable at the burner tip and does not represent a value equivalency at the wellhead. Given that the value ratio based on the current price of crude oil as compared to natural gas is significantly different than the energy equivalency of 6:1, utilizing a 6:1 conversion basis may be misleading as an indication of value.

Estimated Ultimate Recovery – Estimated Ultimate Recovery ("EUR") is an approximation of the quantity of oil or gas that is potentially recoverable or has already been recovered from a reserve or well. EUR is not a defined term within the COGE Handbook and therefore any reference to EUR in this presentation is not deemed to be reported under the requirements of NI 51-101. Readers are cautioned that there is no certainty that the Company will ultimately recover the estimated quantity of oil or gas from such reserves or wells.

Reader Advisories (continued)

Oil and Gas Advisories (cont'd)

Net Present Value Estimates - It should not be assumed that the net present value of the estimated future net revenues of the reserves of InPlay included in this presentation represent the fair market value of the reserves. There is no assurance that the forecast prices and cost assumptions will be attained and variances could be material.

Type Curves and Potential Recovery Estimates - The type curves presented herein reflect a selection from a type curves library provided by InPlay's independent reserve evaluator. In each case the type curve presented is that which in management's assessment feels best represents the expected average drilling results based upon InPlay producing wells in the area as well as non-InPlay wells determined by management to be analogous for purposes of the type curve assignments. Type curves presented incorporate the most recent data from actual well results and would only be representative of the specific drilled locations. There is no guarantee that InPlay will achieve the estimated or similar results derived therefrom. The referenced potential recovery estimates are meant to approximate Proved Plus Probable Undeveloped reserves as defined by COGE. The potential recovery estimates have been generated using the relevant oil type curve noted above and incorporating management assumptions relating to gas and NGL amounts which are based on historical results. These estimates are considered internally generated recovery targets developed by InPlay's technical team and are not reserve or resource estimates prepared in accordance with the requirements of COGE. Accordingly, undue reliance should not be placed on the same. Such information has been prepared by management for the purposes of making capital investment decisions and for internal budget preparation only.

Drilling Locations This presentation discloses drilling locations in two categories: (i) booked locations; and (ii) unbooked locations. Booked locations are proved locations and probable locations derived from InPlay's independent reserves evaluation effective December 31, 2023 and account for drilling locations that have associated proved and/or probable reserves, as applicable. Of the 458 drilling locations identified herein, 173 are booked as proved locations, 24 are booked as probable locations and 262 are unbooked locations. Unbooked locations are management estimates based on prospective acreage and an assumption as to the number of wells that can be drilled per section based on industry practice and internal review. Unbooked locations do not have attributed reserves or resources. Unbooked locations have been identified by management as an estimation of the Company's potential multi-year drilling activities based on evaluation of applicable geologic, seismic, engineering, production and reserves information. There is no certainty that the InPlay will drill all unbooked drilling locations and if drilled there is no certainty that such locations will result in additional oil and gas reserves, resources or production. The drilling locations on which InPlay actually drills wells will depend upon the availability of capital, regulatory approvals, seasonal natural gas prices, costs, actual drilling results, additional reservoir information that is obtained and other factors. While certain of the unbooked drilling locations have been derisked by either InPlay restrictions, oil and other industry participants drilling existing wells in relative close proximity to such unbooked drilling locations, certain unbooked drilling locations are farther away from existing wells where management has less information about the characteristics of the reservoir. Therefore, there is uncertainty whether wells will be drilled in such unbooked locations and if drilled there is more uncertainty that such wells will result in additional oil and gas reserves, resources or production.

	Total Locations	Proved Locations	Probable Locations	Unbooked Locations
Willesden Green Cardium	176	50%	24%	32%
Pembina Cardium	89	26%	22%	15%
Pembina Belly River	58	18%	25%	8%
Duvernay	125	1%	30%	45%
Other	10	5%	0%	1%
Total	458	100%	100%	100%

Oil & Gas Metrics - This presentation may contain metrics commonly used in the oil and natural gas industry, such as "finding and development costs", "finding and development recycle ratio", "finding, development and acquisition costs", "finding, development and acquisition recycle ratio", "payout", "RLI" and "IRR". These terms do not have standardized meanings or standardized methods of calculation and therefore may not be comparable to similar measures presented by other companies, and therefore should not be used to make such comparisons. Management uses oil and gas metrics for its own performance measurements and to provide shareholders with measures to compare InPlay's operations over time. Readers are cautioned that the information provided by these metrics, or that can be derived from the metrics presented in this presentation, should not be unduly relied upon.

Finding and development costs ("F&D costs") are calculated on a per boe basis by dividing the aggregate of the change in future development costs from the prior year for the particular reserve category and the costs incurred on exploration and development activities in the year by the change in reserves from the prior year for the reserve category.

F&D recycle ratio is calculated by dividing the operating netback per boe for the period by the F&D costs per boe for the particular reserve category.

Finding, development and acquisition costs ("FD&A costs") are calculated on a per boe basis by dividing the aggregate of the change in future development costs from the prior year for the particular reserve category and the costs incurred on exploration and development activities and property acquisitions (net of dispositions) in the year by the change in reserves from the year for the reserve category.

FD&A recycle ratio is calculated by dividing the operating netback per boe for the period by the FD&A costs per boe for the particular reserve category.

Payout refers to the time required to pay back the capital expenditures (on a before tax basis) of a project.

Reserve Life Index ("RLI") is calculated by dividing the quantity of a particular reserve category of reserves by the forecast of the first year's production for the corresponding reserve category.

Reserve Replacement: The reserves replacement ratio is calculated by dividing the yearly change in reserves before production by the actual annual production for that year.

Internal Rate of Return ("IRR") refers to the discount rate that makes the net present value of all cash flows of a project equal zero.

Reader Advisories (continued)

Production Breakdown by Product Type

Disclosure of production on a per boe basis in this document consists of the constituent product types as defined in NI 51-101 and their respective quantities disclosed in the table below:

	Light and Medium Crude oil (bbl/d)	NGLS (boe/d)	Conventional Natural gas (Mcf/d)	Total (boe/d)
2016 Average Production	1,318	143	2,871	1,940
2017 Average Production	2,310	352	7,857	3,972
2018 Average Production	2,756	492	8,431	4,653
2019 Average Production	2,627	697	10,058	5,000
2020 Average Production	2,031	668	7,715	3,985
2021 Average Production	2,981	782	12,030	5,768
Prairie Storm Closing Production	505	453	5,050	1,800
2022 Prairie Storm Estimate	965	585	7,230	2,755

	Light and Medium Crude oil (bbl/d)	NGLS (boe/d)	Conventional Natural gas (Mcf/d)	Total (boe/d)
2022 Average Production	3,766	1,402	23,623	9,105
2023 Average Production	3,822	1,396	22,839	9,025
2023 Annual Guidance	3,840	1,390	22,920	9,050 ⁽¹⁾
2024 Annual Guidance	4,090	1,395	22,590	9,250 ⁽²⁾

1. This reflects the mid-point of the Company's 2023 production guidance range of 9,000 to 9,100 boe/d.
2. This reflects the mid-point of the Company's 2024 production guidance range of 9,000 to 9,500 boe/d.
3. With respect to forward-looking production guidance, product type breakdown is based upon management's expectations based on reasonable assumptions but are subject to variability based on actual well results.

Non-GAAP and Other Financial Measures

Throughout this document and other materials disclosed by the Company, InPlay uses certain measures to analyze financial performance, financial position and cash flow. These non-GAAP and other financial measures do not have any standardized meaning prescribed under GAAP and therefore may not be comparable to similar measures presented by other entities. The non-GAAP and other financial measures should not be considered alternatives to, or more meaningful than, financial measures that are determined in accordance with GAAP as indicators of the Company performance. Management believes that the presentation of these non-GAAP and other financial measures provides useful information to shareholders and investors in understanding and evaluating the Company's ongoing operating performance, and the measures provide increased transparency and the ability to better analyze InPlay's business performance against prior periods on a comparable basis.

Non-GAAP Financial Measures and Ratios

Included in this document are references to the terms "free adjusted funds flow", "free adjusted funds flow yield", "operating income", "operating netback per boe", "operating income profit margin", "Net Debt to EBITDA", "Production per debt adjusted share", "EV / DAAFF" and "Reserves per debt adjusted share". Management believes these measures and ratios are helpful supplementary measures of financial and operating performance and provide users with similar, but potentially not comparable, information that is commonly used by other oil and natural gas companies. These terms do not have any standardized meaning prescribed by GAAP and should not be considered an alternative to, or more meaningful than "profit (loss) before taxes", "profit (loss) and comprehensive income (loss)", "adjusted funds flow", "capital expenditures", "corporate acquisitions, net of cash acquired", "net debt", "weighted average number of common shares (basic)" or assets and liabilities as determined in accordance with GAAP as a measure of the Company's performance and financial position.

Free Adjusted Funds Flow ("FAFF") - Management considers FAFF an important measure to identify the Company's ability to improve its financial condition through debt repayment and its ability to provide returns to shareholders. FAFF should not be considered as an alternative to or more meaningful than AFF as determined in accordance with GAAP as an indicator of the Company's performance. FAFF is calculated by the Company as AFF less exploration and development capital expenditures and property dispositions (acquisitions) and is a measure of the cashflow remaining after capital expenditures before corporate acquisitions that can be used for additional capital activity, corporate acquisitions, repayment of debt or decommissioning expenditures or potentially return of capital to shareholders. Refer to the "Forward Looking Information and Statements" section for a calculation of forecast FAFF.

Free Adjusted Funds Flow Yield - InPlay uses "free adjusted funds flow yield" as a key performance indicator. Free adjusted funds flow is calculated by the Company as free adjusted funds flow divided by the market capitalization of the Company. Management considers FAFF yield to be an important performance indicator as it demonstrates a Company's ability to generate cash to pay down debt and provide funds for potential distributions to shareholders. Refer to the "Forward Looking Information and Statements" section for a calculation of free adjusted funds flow yield.

Operating Income/Operating Netback per boe/Operating Income Profit Margin - InPlay uses "operating income", "operating netback per boe" and "operating income profit margin" as key performance indicators. Operating income is calculated by the Company as oil and natural gas sales less royalties, operating expenses and transportation expenses and is a measure of the profitability of operations before administrative, share-based compensation, financing and other non-cash items. Management considers operating income an important measure to evaluate its operational performance as it demonstrates its field level profitability. Operating income should not be considered as an alternative to or more meaningful than net income as determined in accordance with GAAP as an indicator of the Company's performance. Operating netback per boe is calculated by the Company as operating income divided by average production for the respective period. Management considers operating netback per boe an important measure to evaluate its operational performance as it demonstrates its field level profitability per unit of production. Operating income profit margin is calculated by the Company as operating income as a percentage of oil and natural gas sales. Management considers operating income profit margin an important measure to evaluate its operational performance as it demonstrates how efficiently the Company generates field level profits from its sales revenue. Refer below for a calculation of operating income, operating netback per boe and operating income profit margin. Refer to the "Forward Looking Information and Statements" section for a calculation of forecast operating income, operating netback per boe and operating income profit margin.

Reader Advisories (continued)

Non-GAAP and Other Financial Measures (cont'd)

		3 mos. Ended Dec 31/2023	3 mos. Ended Dec 31/2022	Year Ended Dec 31/2023	Year Ended Dec 31/2022
Revenue	\$000's	47,631	58,161	179,366	238,590
Royalties	\$000's	(6,339)	(10,375)	(22,516)	(38,392)
Operating expenses	\$000's	(13,233)	(13,081)	(49,576)	(43,740)
Transportation expenses	\$000's	(940)	(1,118)	(3,130)	(3,920)
Operating income	\$000's	27,119	33,587	104,144	152,538
Sales volumes	Mboe	882.8	885.3	3,294.1	3,323.4
Revenue	\$/boe	53.95	65.69	54.45	71.79
Royalties	\$/boe	(7.18)	(11.72)	(6.84)	(11.55)
Operating expenses	\$/boe	(14.99)	(14.78)	(15.05)	(13.16)
Transportation expenses	\$/boe	(1.06)	(1.26)	(0.95)	(1.18)
Operating netback	\$/boe	30.72	37.93	31.61	45.90
Operating income profit margin	%	57%	58%	58%	64%

Net Debt to EBITDA - Management considers Net Debt to EBITDA an important measure as it is a key metric to identify the Company's ability to fund financing expenses, net debt reductions and other obligations. EBITDA is calculated by the Company as adjusted funds flow before interest expense. When this measure is presented quarterly, EBITDA is annualized by multiplying by four. When this measure is presented on a trailing twelve month basis, EBITDA for the twelve months preceding the net debt date is used in the calculation. This measure is consistent with the EBITDA formula prescribed under the Company's Senior Credit Facility. Net Debt to EBITDA is calculated as Net Debt divided by EBITDA. Refer to the "Forward Looking Information and Statements" section for a calculation of forecast Net Debt to EBITDA.

Production per Debt Adjusted Share - InPlay uses "Production per debt adjusted share" as a key performance indicator. Debt adjusted shares should not be considered as an alternative to or more meaningful than common shares as determined in accordance with GAAP as an indicator of the Company's performance. Debt adjusted shares is a non-GAAP measure used in the calculation of Production per debt adjusted share and is calculated by the Company as common shares outstanding plus the change in net debt divided by the Company's current trading price on the TSX, converting net debt to equity. Debt adjusted shares should not be considered as an alternative to or more meaningful than weighted average number of common shares (basic) as determined in accordance with GAAP as an indicator of the Company's performance. Management considers Debt adjusted share to be a key performance indicator as it adjusts for the effects of capital structure in relation to the Company's peers. Production per debt adjusted share is calculated by the Company as production divided by debt adjusted shares. Management considers Production per debt adjusted share to be a key performance indicator as it adjusts for the effects of changes in annual production in relation to the Company's capital structure. Refer to the "Forward Looking Information and Statements" section for a calculation of forecast Production per debt adjusted share.

EV / DAAFF - InPlay uses "enterprise value to debt adjusted AFF" or "EV/DAAFF" as a key performance indicator. EV/DAAFF is calculated by the Company as enterprise value divided by debt adjusted AFF for the relevant period. Debt adjusted AFF ("DAAFF") is calculated by the Company as adjusted funds flow plus financing costs. Enterprise value is a capital management measure that is used in the calculation of EV/DAAFF. Enterprise value is calculated as the Company's market capitalization plus net debt. Management considers enterprise value a key performance indicator as it identifies the total capital structure of the Company. Management considers EV/DAAFF a key performance indicator as it is a key metric used to evaluate the sustainability of the Company relative to other companies while incorporating the impact of differing capital structures. Refer to the "Forward Looking Information and Statements" section for a calculation of forecast EV/DAAFF.

Reader Advisories (continued)

Non-GAAP and Other Financial Measures (cont'd)

Capital Management Measures

Adjusted Funds Flow - Management considers adjusted funds flow to be an important measure of InPlay's ability to generate the funds necessary to finance capital expenditures. Adjusted funds flow is a GAAP measure and is disclosed in the notes to the Company's financial statements for the year ended December 31, 2023. All references to adjusted funds flow throughout this document are calculated as funds flow adjusting for decommissioning expenditures and transaction and integration costs. Decommissioning expenditures are adjusted from funds flow as they are incurred on a discretionary and irregular basis and are primarily incurred on previous operating assets. Transaction costs are non-recurring costs for the purposes of an acquisition, making the exclusion of these items relevant in Management's view to the reader in the evaluation of InPlay's operating performance. The Company also presents adjusted funds flow per share whereby per share amounts are calculated using weighted average shares outstanding consistent with the calculation of profit per common share.

Net debt - Net debt is a GAAP measure and is disclosed in the notes to the Company's financial statements for the year ended December 31, 2023. The Company closely monitors its capital structure with the goal of maintaining a strong balance sheet to fund the future growth of the Company. The Company monitors net debt as part of its capital structure. The Company uses net debt (bank debt plus accounts payable and accrued liabilities less accounts receivables and accrued receivables, prepaid expenses and deposits and inventory) as an alternative measure of outstanding debt. Management considers net debt an important measure to assist in assessing the liquidity of the Company.

Supplementary Measures

"Average realized crude oil price" is comprised of crude oil commodity sales from production, as determined in accordance with IFRS, divided by the Company's crude oil volumes. Average prices are before deduction of transportation costs and do not include gains and losses on financial instruments.

"Average realized NGL price" is comprised of NGL commodity sales from production, as determined in accordance with IFRS, divided by the Company's NGL volumes. Average prices are before deduction of transportation costs and do not include gains and losses on financial instruments.

"Average realized natural gas price" is comprised of natural gas commodity sales from production, as determined in accordance with IFRS, divided by the Company's natural gas volumes. Average prices are before deduction of transportation costs and do not include gains and losses on financial instruments.

"Average realized commodity price" is comprised of commodity sales from production, as determined in accordance with IFRS, divided by the Company's volumes. Average prices are before deduction of transportation costs and do not include gains and losses on financial instruments.

"Adjusted funds flow per weighted average basic share" is comprised of adjusted funds flow divided by the basic weighted average common shares.

"Adjusted funds flow per weighted average diluted share" is comprised of adjusted funds flow divided by the diluted weighted average common shares.

"Adjusted funds flow per boe" is comprised of adjusted funds flow divided by total production.

"Total payout ratio" is calculated as dividends paid or declared plus capital expenditures divided by adjusted funds flow. Management believes that total payout ratio provides a useful measure of the Company's capital reinvestment and dividend policy, as a percentage of the amount of adjusted funds flow.

Reader Advisories (continued)

Forward Looking Information and Statements

This document contains certain forward-looking information and statements within the meaning of applicable securities laws. The use of any of the words “expect”, “anticipate”, “continue”, “estimate”, “may”, “will”, “project”, “should”, “believe”, “plans”, “intends”, “forecast” and similar expressions are intended to identify forward-looking information or statements. In particular, but without limiting the foregoing, this document contains forward-looking information and statements pertaining to the following: the Company's business strategy, milestones and objectives; the future net value of InPlay's reserves, the future development capital and costs, the life of InPlay's reserves and the net asset values disclosed under the heading “Net Asset Value” including the internal value ascribed to undeveloped acreage; the Company's planned 2024 capital program including wells to be drilled and completed and the timing of the same; 2024 guidance based on the planned capital program and all associated underlying assumptions set forth in this document including, without limitation, forecasts of 2024 annual average production levels, adjusted funds flow, free adjusted funds flow, Net Debt/EBITDA ratio, operating income profit margin, and Management's belief that the Company can grow some or all of these attributes and specified measures; light crude oil and NGLs weighting estimates; expectations regarding future commodity prices; future oil and natural gas prices; future liquidity and financial capacity; future results from operations and operating metrics; future costs, expenses and royalty rates; future interest costs; the exchange rate between the US\$ and Cdn\$; future development, exploration, acquisition, development and infrastructure activities and related capital expenditures, including our planned 2024 capital program; the amount and timing of capital projects; and methods of funding our capital program.

The internal projections, expectations, or beliefs underlying our Board approved 2024 capital budget and associated guidance are subject to change in light of, among other factors, the impact of world events including the Russia/Ukraine conflict and war in the Middle East, ongoing results, prevailing economic circumstances, volatile commodity prices, and changes in industry conditions and regulations. InPlay's 2024 financial outlook and guidance provides shareholders with relevant information on management's expectations for results of operations, excluding any potential acquisitions or dispositions, for such time periods based upon the key assumptions outlined herein. Readers are cautioned that events or circumstances could cause capital plans and associated results to differ materially from those predicted and InPlay's guidance for 2024 may not be appropriate for other purposes. Accordingly, undue reliance should not be placed on same.

Forward-looking statements or information are based on a number of material factors, expectations or assumptions of InPlay which have been used to develop such statements and information but which may prove to be incorrect. Although InPlay believes that the expectations reflected in such forward-looking statements or information are reasonable, undue reliance should not be placed on forward-looking statements because InPlay can give no assurance that such expectations will prove to be correct. In addition to other factors and assumptions which may be identified herein, assumptions have been made regarding, among other things: the impact of increasing competition; the general stability of the economic and political environment in which InPlay operates; the timely receipt of any required regulatory approvals; the ability of InPlay to obtain qualified staff, equipment and services in a timely and cost efficient manner; drilling results; the ability of the operator of the projects in which InPlay has an interest in to operate the field in a safe, efficient and effective manner; the ability of InPlay to obtain debt financing on acceptable terms; the anticipated tax treatment of the monthly base dividend; fluctuation the timing and amount of purchases under the Company's NCIB; field production rates and decline rates; the ability to replace and expand oil and natural gas reserves through acquisition, development and exploration; the timing and cost of pipeline, storage and facility construction and the ability of InPlay to secure adequate product transportation; future commodity prices; that various conditions to a shareholder return strategy can be satisfied; the ongoing impact of the Russia/Ukraine conflict and war in the Middle East; currency, exchange and interest rates; regulatory framework regarding royalties, taxes and environmental matters in the jurisdictions in which InPlay operates; and the ability of InPlay to successfully market its oil and natural gas products.

Without limitation of the foregoing, readers are cautioned that the Company's future dividend payments to shareholders of the Company, if any, and the level thereof will be subject to the discretion of the Board of Directors of InPlay. The Company's dividend policy and funds available for the payment of dividends, if any, from time to time, is dependent upon, among other things, levels of FAFF, leverage ratios, financial requirements for the Company's operations and execution of its growth strategy, fluctuations in commodity prices and working capital, the timing and amount of capital expenditures, credit facility availability and limitations on distributions existing thereunder, and other factors beyond the Company's control. Further, the ability of the Company to pay dividends will be subject to applicable laws, including satisfaction of solvency tests under the *Business Corporations Act* (Alberta), and satisfaction of certain applicable contractual restrictions contained in the agreements governing the Company's outstanding indebtedness.

The forward-looking information and statements included herein are not guarantees of future performance and should not be unduly relied upon. Such information and statements, including the assumptions made in respect thereof, involve known and unknown risks, uncertainties and other factors that may cause actual results or events to differ materially from those anticipated in such forward-looking information or statements including, without limitation: the continuing impact of the Russia/Ukraine conflict and war in the Middle East; inflation and the risk of a global recession; changes in our planned 2024 capital program; changes in our approach to shareholder returns; changes in commodity prices and other assumptions outlined herein; the risk that dividend payments may be reduced, suspended or cancelled; the potential for variation in the quality of the reservoirs in which we operate; changes in the demand for or supply of our products; unanticipated operating results or production declines; changes in tax or environmental laws, royalty rates or other regulatory matters; changes in development plans or strategies of InPlay or by third party operators of our properties; changes in our credit structure, increased debt levels or debt service requirements; inaccurate estimation of our light crude oil and natural gas reserve and resource volumes; limited, unfavorable or a lack of access to capital markets; increased costs; a lack of adequate insurance coverage; the impact of competitors; and certain other risks detailed from time-to-time in InPlay's continuous disclosure documents filed on SEDAR including our Annual Information Form and our MD&A.

This document contains future-oriented financial information and financial outlook information (collectively, “FOFI”) about InPlay's financial and leverage targets and objectives, potential dividends, share buybacks and beliefs underlying our Board approved 2024 capital budget and associated guidance, all of which are subject to the same assumptions, risk factors, limitations, and qualifications as set forth in the above paragraphs. The actual results of operations of InPlay and the resulting financial results will likely vary from the amounts set forth in this document and such variation may be material. InPlay and its management believe that the FOFI has been prepared on a reasonable basis, reflecting management's reasonable estimates and judgments. However, because this information is subjective and subject to numerous risks, it should not be relied on as necessarily indicative of future results. Except as required by applicable securities laws, InPlay undertakes no obligation to update such FOFI. FOFI contained in this document was made as of the date of this document and was provided for the purpose of providing further information about InPlay's anticipated future business operations and strategy. Readers are cautioned that the FOFI contained in this document should not be used for purposes other than for which it is disclosed herein.

The forward-looking information and statements contained in this document speak only as of the date hereof and InPlay does not assume any obligation to publicly update or revise any of the included forward-looking statements or information, whether as a result of new information, future events or otherwise, except as may be required by applicable securities laws.

In addition, this document contains certain forward-looking information relating to economics for drilling opportunities in the areas that InPlay has an interest. Such information includes, but is not limited to, anticipated payout rates, rates of return, profit to investment ratios and recycle ratios which are based on additional various forward looking information such as production rates, anticipated well performance and type curves, the estimated net present value of the anticipated future net revenue associated with the wells, anticipated reserves, anticipated capital costs, anticipated finding and development costs, estimated ultimate recoverable volumes, anticipated future royalties, operating expenses, and transportation expenses.

Risk Factors to FLI

Risk factors that could materially impact successful execution and actual results of the Company's 2024 capital program and associated guidance and estimates include:

- volatility of petroleum and natural gas prices and inherent difficulty in the accuracy of predictions related thereto;
- the extent of any unfavourable impacts of wildfires in the province of Alberta.
- changes in Federal and Provincial regulations;
- the Company's ability to secure financing for the Board approved 2024 capital program and longer-term capital plans sourced from AFF, bank or other debt instruments, asset sales, equity issuance, infrastructure financing or some combination thereof; and
- those additional risk factors set forth in the Company's MD&A and most recent Annual Information Form filed on SEDAR

Key Budget and Underlying Material Assumptions to FLI (cont'd)

		Actuals FY 2023	Guidance FY 2023 ⁽¹⁾
Production	Boe/d	9,025	9,000 – 9,100
Opening Net Debt	\$ millions	\$33	\$33
Ending Net Debt	\$ millions	\$46	\$45 – \$47
Weighted avg. outstanding shares	# millions	89.1	89.1
Assumed Share price	\$	2.65 ⁽³⁾	2.65
Prod. per debt adj. share growth ⁽²⁾⁽⁵⁾		(8%)	(7%) – (9%)

		Actuals FY 2023	Guidance FY 2023 ⁽¹⁾
Share outstanding, end of year	# millions	91.1	91.1
Assumed Share price	\$	2.21 ⁽⁴⁾	2.21
Market capitalization	\$ millions	\$201	\$201
Net Debt	\$ millions	\$46	\$45 – \$47
Enterprise value	\$millions	\$247	\$246 – \$248
Adjusted Funds Flow	\$ millions	\$92	\$91 – \$93
Interest	\$/boe	1.65	1.50 – 1.70
Debt Adjusted AFF	\$ millions	\$98	\$97 – \$99
EV/DAAFF ⁽⁵⁾		2.5	2.6 – 2.5

- (1) As previously released January 29, 2024.
 - (2) Production per debt adjusted share is calculated by the Company as production divided by debt adjusted shares. Debt adjusted shares is calculated by the Company as common shares outstanding plus the change in net debt divided by the Company's current trading price on the TSX, converting net debt to equity. Future share prices are assumed to be consistent with the current share price.
 - (3) Weighted average share price throughout 2023.
 - (4) Ending share price at December 31, 2023.
 - (5) The Company has withdrawn its 2024 and 2025 production per debt adjusted share, EV/DAAFF and FAFF yield forecast for 2024 and 2025. The Company believes that these metrics can be quite variable and hard to reasonably estimate given the volatility in the Company's share price, which is a material assumption used in the calculation of these metrics.
 - (6) Continued commodity price volatility and current weak industry sentiment has resulted in the Company taking a conservative and disciplined approach to capital allocation in 2024 and future years. Preliminary estimates and plans for 2025 and beyond will be dependent on the stability of commodity prices and industry sentiment balancing manageable growth and ensuring the long term sustainability of our return of capital to shareholder strategy. As a result, the Company withdraws its preliminary estimates and plans for 2025.
- See "Production Breakdown by Product Type" below
 - Quality and pipeline transmission adjustments may impact realized oil prices in addition to the MSW Differential provided above
 - Changes in working capital are not assumed to have a material impact between the years presented above.
